

RUSCAN 2.0

lumber quality scanner

RuScan 2.0 is a complex system which scans lumber, finds and measures lumber defects, assigns lumber types, determines wood species and optimizes trimming.

Advantages:

- patented method for lumber defects detection which gives 16+ board images for analyses
- defects are analyzed by the Expert software based on neural network
- the system is served by one operator
- convenient reporting system viewing via any browser
- integration with the other company products
